

Project Title:

Development of a Web-Based Integrated Accounting System with Digital Financial Services for TUP Visayas

1. System Overview

1.1 Short Description

- A web-based Accounting System with Digital Financial Services for our university (TUP Visayas). The goal of this system is to replace the manual paper transactions with a centralized system for students and anyone alike, for them to transact online.

1.2 Type of System:

- Web-Based System

1.3 Target Users:

- Students and Accounting Staff/Cashiers

2. Problem Definition

2.1 Current System (Manual / Existing Process):

- Paper and Face-to-Face Transaction

2.2 Problems Encountered:

- Still Using Paper
- Face-to-face only
- No online presence and information available

2.3 Why the Existing System is Inefficient:

- Because it's outdated, and other universities are adapting to online transactions. Also, students are needed to go to school just for a transaction, and it's a hassle for everyone far from the university.

3. Proposed System Features

3.1 Core Features:

- Online Transactions
- UX friendly forms for transactions
- Reliable account verification using student ID information, for
- Display information like the location of the office, Board of Staffs, etc.

3.2 Digital Financial Services:

- Applying for a summer class
- Paying for school fees
- School materials Shop (uniform textile, lanyard, and ID)

3.3 User Roles & Permissions:

- Admin and Staff: Manage Transactions, Verify Students, and everything related to accounting and finance.
- Student: Access to the online accounting system for transactions, etc.

4. Sample System Workflow

- Landing Page: Login (if invalid, repeat) > Homepage/Dashboard
- Homepage/Dashboard > Pay Fees | Apply Summer Class | Buy Products | Transaction History | Information Board > Logout
- Pay Fees > Form (Select > Pay (if invalid payment, error) > Submit > Record Payment/Generate Receipt > Homepage/Dashboard
- Apply Summer Class > Form [Select Class > Is Student Eligible (if not, display “Not Eligible” then proceed to Homepage) > Show available subject > Select subject > Slot available (if not, display “Slots full.” then repeat) > Pay (if invalid payment, error) > Submit > Record Enrollment/Generate Receipt > Homepage/Dashboard
- Buy Products > Buy uniform, lanyard, ID > Form > Pay (if invalid payment, error) > Submit > Record Payment/Generate Receipt > Homepage/Dashboard
- Transaction History > Logs of Transactions > Homepage/Dashboard
- Information Board > About TUP Visayas Accounting | Office location | Board of Staffs
- Every page after logging in > Logout

5. Data / Information to be Stored

- Student Information
- Transaction Records
- Payment Status
- User Accounts

6. Technology Stack

Frontend: Vanilla web languages (HTML, CSS, JS)

Backend: PHP, APIs for transaction (mainly GCash)

Database: MySQL

7. Security & Constraints

Security Features:

- Login authentication
- Role-based access
- Secure online transaction

Limitations:

- Requires internet
- Designed for TUP Visayas only

8. Evaluation Plan

Method: PSSUQ and Survey

Respondents: 10 Students, 2 IT Specialists, and 1 Accounting Staff

9. Unique Selling Point (USP):

- Online compared to Paper. No time-consuming face-to-face transaction required. Safe and reliable payment. Centralized information and digital presence of TUP Visayas accounting.
